Abstract

In general, people levied every kind of inconveniences to population growth. The United Nations' 17 Sustainable Development Goals (SDGs) aim to achieve decent lives for all on a healthy planet by 2030. As things stand, most of them are likely to be missed. Against this, the UN expected getting relief from the bad situation to better in 165 years to come. This long gestation time period brought global tremendous worry. Main cause behind this situation assigned was gap in gender parity that lead to non-accomplishment of goals of the SDG. Positive, empowering population solutions were keys to meeting the SDGs. In this grim situation a new Godly plausible family gender balancing was innovated which will revamp all 17 aspects in excellent way accomplishment of SDG in short span of time bringing with immediate showing results. The gender balanced families will usher acquiring safety, security, freedom from any kind of unpleasant situation, which will enable females prosper in professional education bringing gender equality, which could not get acquired by natural cause with female genders. The equal gender balanced situation will bring automatic population control to a ripple effect influencing multiple areas like education, health, economic growth and more. This will make right and correct path of policy tool for public governance. Thus, new innovation of Godly plausible gender balancing will revamp utility and enable bring a wonderful new dream world. A novel personal kit was made to be kept by females over 15 years to acquire right of humanity.

Keywords: Child abuse atrocities on women; Ecosystem services; Gender ratio parity; Health and wellness; Population control and Sustainable development goal.

Introduction

Population development in the world had become issues of surplus, low and different rates of growths. Figure 1 depicts worldly scenarios of such long-term growth pattern at decades' intervals. A general view appeared that the population started growing from 1950. In later 150 years approaching towards present time the population's growth had stepped up becoming

policy thinkers and makers worry. When one considers on the basis of active population there occur varying situations on populating with respect to ages, there occurring shortages and surplus. In order to ameliorate situations on populations the United Nations' 17 Sustainable Development Goals (SDGs) aimed to achieve decent lives for all on a healthy planet by 2030. The UN SDG accomplishments were not getting accomplished because of huge population. One of the reasons was large gap in parity

Citation: Yadava RC, Yadav J. Godly Plausible Prismatic Family Gender Balancing Proving a New Game Changer Accomplishing in Short Time Span for Across all 17 UN Sustainable Development Goals. Med Discoveries. 2025; 4(12): 1286.

in gender balances. Besides such bad situation there occurred bad situations of family gender misbalances which lead to lot of disadvantages. In early days to even present times lot of atrocities were faced by women and girl Children reported in 2023 [1] and even now appearing in Hindustan 2025 [2].

Global impact includes UN Sustainable Development Goal (SDGs) 5 (Gender Equality), 9 (Industry, Innovation and Infrastructures), 11 (Sustainable cities and Communities) which considered the Female: Male ratio parity as main set back hindering the accomplishments of the SDG. Climate and environmental sustainability, Economic growth and poverty reduction will get affected by the parity of equality. While the global population parity remains important individual family misbalances also cause lot of disadvantageous situations. Authors Previous studies [3-12,14-19] brought recent advancements inhuman biology covering many aspects of gynecological concern. It had brought family gender balancing, which remained as an important aspect loss of parental legacies to be taken up at family front. Additionally, many other legacies of art and science will get highly affected by the balanced genders. Inspiring examples are Marie curing (pioneering female scientists), Malala Yousufzai, Jaane Goodall (Conservation and Science leader), Women leader tech startups and innovations a like legacies can be made survive forever by gender balanced families. These developments will foster Science and Technologies to prosperity marching without any repetitions and wastage of resources and time. The prismatic gender balancing is highly important outlook bringing advantages. Therefore, combining both the avenues one can understand the tremendous scope of benefits of prismatic gender balances in families that will foster accomplishing the SDGs. Authors novel researches on Godly prismatic gender balancing, enabling building charter of ecosystems that will have capacity to bring tremendous production, consumption and managing the developing wastes enabling creating surplus dream word. These and other emerging situations still demand examining the utility of the Godly plausible prismatic gender balancing cover all 17 UNSDGs. Creating the Godly plausible prismatic gender balancing being advancement human biology adds new opportunities to manage and support prosperities of the SDGs. Thus, this study was undertaken to look how the UNSDGs accomplishments can be fostered.

Figure 1: Global long time population dynamics.

Material and methods

Several aspects involved development of Godly plausible prismatic gender balancing was explored. Its vast potential was examined and valued to establish its application on other

aspects. This study endeavored to evaluate utility of Godly plausible prismatic gender balancing on accomplishing UN Sustainable Development Goal (SDG).

The new concept of prismatic gender balancing

The Godly plausible prismatic family gender balancing was devised in 2023. For this development deep studies of well-known cases of family genders were studied. Developing genders different classes were deeply analyzed, which provided highly valuable information on different types of developing genders.

New advancement in gynecology

Following development of the Godly plausible family gender balancing several aspects of gynecology viz from conception to delivery, child care and post birth were brought to produce child from zero to hero. Genetic fasting was a new manifestation of Godly plausible prismatic gender balancing, which derives special attention of gynecological concern.

UN Sustainable development goals (SDG)

All detailed reasons and impacts for explanations brought by the U.N were reviewed to bring awareness of factors that appeared in formulation of the SDG. This enables grasp that how the prismatic gender balancing will facilitate accomplishment of the SDG.

How misbalance in gender ratio implicates the women and female child

The study on the process of development of Godly plausible prismatic gender balancing made it clear that hormonal changes that control development of age implicate beyond one’s control and things develop causing a situation of helplessness in girl children, beyond control. This renders girls fail in not accomplishing level of professional education, which take long time. With such situations, Urinary Tract Infection Diseases (UTID) keep disturbing problem of health and allied limitations. The situations implicate further family misbalances in genders. In these situations, the new innovative Godly plausible prismatic gender balancing will come to risqué. This new innovative developments needs bringing to larger awareness to overcome the misbalances in families and acquire multiple benefits.

Implication of recent reports on suffering of women a worldly scenario

The Lacent Journal [2] published research report on various issues and tragedies faced by over one Arab (100 Crores-10 [9]) women in year 2023 that they suffered childhood abuses. This report becomes an eye opener implicating worry on situation of women. The prismatic gender balancing has lot of relieving implications of childhood abuses by their known near relatives, which testament utility of plausible Godly prismatic gender balancing accomplishing goals of SDG. The SDG, aimed to achieve decent lives for all on a healthy planet by 2030.

How the lack of real facts of life makes any women and child deal adoption of welfare measures which prove non effective

Some reasons viz girls dropping after secondary educations, development of hormonal changes bring life in to additional bodily, mental and social pressures. These reasons are brought in coming part of results showing implications affecting policy issues.

Results

This innovative study

Authors had brought detailed developments on deep studies of cases of aberrations in gender developments. The gender theory discovered by Williams and Steven in early part of 19th Century (1905), reported by Singh (2016) [3]. Many further developments were carried out on human biology.

The Godly plausible prismatic gender balancing

The human population grew in highly random process and acquired huge population in the world, though with remarkable varying thinking on the development and its occurrences. In highly developed country Switzerland well known for their planned family developed it was found that well planned pregnancies could bring mature delivery merely 24% and remaining 76% were on random unplanned. In that country female partner weighed pros and cons on to have second child on economic considerations. Thus, it showed that even for the developed country the Godly plausible prismatic gender balancing has bright future of its usefulness.

Gender theory (XX-XY) female –male gender theory was developed by William and Steven in 1905, reported by Singh, 2016. This theory served as scientific basis for developments in human biology. But they're occurred lot of aberrations in expected results, making people loose trust on the theory. People adopted many ways of acquiring genders as well as child births by grace of gods. Authors' study 16 revealed that how people rush up at auspicious festival days at different gods and goddesses' temples to acquire blessings for having babies of choice. In such situation the Godly plausible prismatic gender balancing based on gender theory, thus bringing people from blind believes to scientific thinking. A new manifestation of Godly plausible gender balancing named as genetic fasting was brought for promoting adoption by people. Author's studies showed found ways of overcoming genetic disorders and acquiring parental protective umbrella, where such losses occur in developing ender of child and saving ancestral legacies. The gender theory was advanced to bring designer baby by choice and not mere chance. It also

developed post birth care of babies bringing from zero hero. It also brought development of decent and ability-based personalities to be able to manage unforeseen problems that arrive in one's life time.

Popularity of the Godly plausible gender theory grew and demands developed for other advances in human biology Study [17]. In this direction study on twin births opened ne repository asset for increasing problems of twin births, which brings tremendous hardship of life children, parents and loss of legacies and setback for secondary natural resources [18].

Crucial factors and justifications leading to development of sustainable development goals (SDG)

The factors were no poverty, zero hunger, good health and wellness and quality educations, all aspects related to human needs, well explainable by hierarchy of human needs. Following factors viz Gender equality, clean water and sanitation, Affordable and clean energy, decent work and economic growth delved on developing pressures on fulfilling human needs. Factors on infrastructures viz Industry innovation and infrastructures, Reduced inequalities, Sustainable cities and communities constituted developing infrastructures. The remaining factors viz Responsive consumption and production, Climate action, Life below water, Life on earth, Peace justice and strong institutions and developed on enhancing productivity of resources and partnerships their rational sharing.

This author conducted innovative researches on various topics viz zero hunger, good health and wellness and quality educations, Gender equality, clean water and sanitation, affordable and clean energy, responsive consumption and production, climate action, life below water and partnerships on sharing ground water extraction for various needs and scarcities. These studies facilitated enhancement in productivities, magnification and sharing of benefits. Here also prismatic gender balancing enabled all families regulate their balanced families and charter ecosystems from production to consumption and management of wastes. These studies showed good capability of fortifying the resources supporting the human welfares.

Table 1: Crucial factors attracting for bringing U.N. sustainable development goals (SDG).

S.No	Crucial factors	Referenced cases	Alleviating factor	Who can do it?
1	No poverty	Foreseen no possibility of reduction in poverty in 2021. World's poor – Nigeria, India and the Democratic Republic of Congo will not grow their economies faster than their populations.	Wisdom	**
2	Zero hunger	According to the World Resources Institute, the calorie requirements of a population of 10 billion are higher than current total 56% crop production.	Wisdom can bring new ways to bring sufficiency	**
3	Good health and well being	Worldwide, still almost half of all pregnancies are unintended and more than 800 women die from pregnancy-related complications every day	Genetic, new innovative relieving development	**
4	Quality education	Still one in four girls does not attend secondary school and in sub-Saharan Africa, the number of girls out of secondary school has increased by 7 million since 2007 due to the region's population growth.	Natural cause stands for this setback.	**
5	Gender equality	Number of women and girls subjected to harmful practices is increasing due to slow progress and population growth.	Helplessness. Balanced family gender stands as answer to this	**
6	Clean water and sanitation	Experts estimate that by 2050, 5 billion people more than half the global population will live in water stressed regions.	Innovative researches will facilitate good living	**
7	Afforddable and clean energy	Global energy demand is expected to increase by 50% over the next 30 years as a result of population growth and economic development.	New innovation brought to overcome such limitations	**

8	Decent work and economic growth	Large population is exerting a lot of pressure on economy. Many countries made tremendous gains over the years but the impact was not reflected on economy due to simultaneous growth of population.	The gender balanced families will bring positive facilitating effect.	**
9	Industry innovation and infrastructures	Conversion of land to human infrastructure is a key driver of biodiversity loss, and construction is a major source of greenhouse gases.	Multi stories biodiversity with reduced GH Gemiission.	**
10	Reduced inequalities	Vast disparities exist between the rich world and the Global South, and within countries themselves.	Female genders take major works, which suffers disparities.	**
11	Sustainable cities and communities	More than half the world's population lives in urban areas today. By 2050, this proportion is expected to rise to 68%.	Wise infrastructures and smart cities to cope with building population by vertical growth.	**
12	Responsive consumption and production	The UN need to take advantages Eco system services.	Wisdom will overcome all necessary shortfalls	**
13	Climate action	Peoples' joint action to control the environmental worsening situations.	Wisdom	**
14	Life below water	Later on realized possible potential of fishery.	Wisdom	**
15	Life on earth	All activities that can get visualized for improvement.	Wisdom	**
16	Peace justice and strong institutions	Social factor for futuristic scenario.	Social harmony	**
17	Partnerships	Magnification of benefits from common pooled properties and sharing in rational way.	Ground water resources sharing.	**
	Total aspect coverage	17	17**	100%

**New innovation Godly plausible prismatic gender balancing. The charter of the ecosystem will be created by the Godly plausible family gender balancing that will produce multiple benefits.

Table 2: List of components of UN sustainable development Goals accomplishing by the Godly plausible prismatic gender balancing.

Issues	Emblem	Feature supported by RBF-NANO	Possible coverage
No poverty		Poverty can be eradicated by a feasible and adoptable system of food production. The new innovation will work as auto functioning for controlling populations.	*
Zero hunger		The N-RBF was proven as best producer to supplement all in system for making zero hunger	*
Good Health and well being		The plausiblegender balanced family will enable brining sufficiency of food and nutrition that will enable good health and well being.	*
Quality education		The plausible prismaticism will enable overcome set backs for women and girl children and empower all in reproduction age to have good professional long time taking educations.	*
Gender equality		The Godly plausible prismatic gender balancing empowerment being novel innovaton brings gender equality, which were not possible earlier.Thus, gender equality become a positive factor.	*
Clean water and sanitation		Several innovations had been coming that will facilitate availability of clean water and sanitation. Civil and environmental innovation and hydrology will be taking by the gender equal highly educted gendtry.	*

Affordable and clean energy		This author's innovation enable bring clean and green energy by hydrogen. New hydrogen <i>Choolha</i> developed by this author will be coming up in this sphere.	*
Decent work and economic growth		All aspects from production to consumption and management of wastes will be very cautiously under taken by Gender balanced members making decent work and good economic growth.	*
Industry innovation and infrastructures		New impetus had been appearing to take care industrial innovations and building infrastructures.	*
Reduced inequalities		So far gender inequality had been a possible factor. But as a result of Godly plausible family gender balancing now new scenario will bring freedom from such limitations. Hence, the SDG will get quickly accomplished.	*
Sustainable cities and communities		The gender balanced families and gentry be building sustainable cities and decent communities with harmony and happiness.	*
Responsive consumption and production		Better understanding of ecosystem services will be highly responsive to production and consumption responses.	*
Climate action		Better measures have been appearing as it came out at COP 30 summit in Brazil. Innovations were brought out by this author.	*
Life below water		New innovative developments are coming on fisheries and marine biology. This author's new sweet water hydro ecosystem by using flood water at sea and river junctions provides tremendous opportunities and reducing pressure on the terrestrial earth surface.	*
Life on earth		Limitations getting reduced will prosper activities on the earth.	*
Peace justice and strong institutions		There are institutions, but need lot of policy reformations for justice. Gender balanced population will be able to acquire peace, justice and strong institutions.	*
Partnership for the goal		As an example this author brought new water partnerships for ground water governance, which remains highly crucial during summer.	*
Total aspect coverage		Total 17 Highly fostering *=17	17, All 17* 100%

The sustainable development goal (SDG)

The United Nations' 17 Sustainable Development Goals (SDGs) aim to achieve decent lives for all on a healthy planet by 2030. As things stand, most of them are likely to be missed. This is partly because they fail to address human population growth. Positive, empowering population solutions are keys to meeting the SDGs. Links between population and each of the 17 goals were also developed.

This research endeavored enhancement in longevity of life span [11]. The author brought new ecosystem services to produce from deficit to surplus new world [12]. Many research publications have been brought to create the dream world with Saffron economy [13]. The gender balanced family will create ecosystem services which bring new world from deficit to surplus dream world with plentiful employment opportunities [14]. New theory of least strenuous path & least energy expenditure was discovered that will solve many problems of nutrient

building soil health causing problems of pollution, environment and water protection with ease and liking from reluctance in agriculture to liking in the people towards the natural sciences [15]. The new gender balancing will be highly accessible to the gentries. It needs bringing awareness to the people.

Thus, nature based Godly plausible gender balancing having plentiful scope to produce many benefits of conservation of legacy forever, building secondary natural resources, advancing science and technology, without wasting resources and time.

Recent scenarios implicating post launch of SDGs

A recent report brought by the *Lacant Journal*, as brought out in sub section 2.5, became an eye opener (Hindustan, 2025) [2]. This factor is highly maneuverable by the Godly plausible gender balancing. In the world more than 10⁹ women suffered child abuse when they acquired 15 years or more during year 2023. Nearly 60.8 Crore women suffered abuse by their near relatives. The *Lacant* report was that South African Sub-Saharan region and South Asia, such abuses were done maximum by their own near relatives. The sufferers had worry and mental ailments including cyzopherania (serious mental disorder) and attempting suicides. The researchers believed that this issue was deprivation of right of humanity; December 11, is declared as the day of Humanity right. The journal reported combating measures of supporting laws, enhancing gender equality and enhancement as helping welfare provisions. Thus, Godly plausible family gender balancing will bring multiple benefits by improving family fabrics, providing accompaniments of brother and taking good care of women that will help accomplishing the UN SDG.

New innovative measures for welfare of women fostering gender equality

Toilet facilities are developed as integral part, in urban agglomerations and cities. In highly crowded habitations separate toilet facilities are developed for males and females in crowded localities and mega cities. Some films were made on building such toilet facilities that might have served its purpose of popularization. Likewise, campaigns were popularized on making sanitary pads for women. Maternity leaves of varying durations are granted in almost all countries. Former Chief Justice of the Supreme Court of India recently made very good direction to institutions to give a leave for women for their menstruation cycle periods. The bleeding problems are unexpected and cause lot of embracement when and if starts for the girls and women of intelligent people. This natural phenomenon is very probabilistic, but certain to occur, but could not come to attention of the wisdom to think about it. Recently, a case appeared in media that on the Indigo Flights in Delhi cancelled en mass, father of a girl was seen crying for providing a sanitary pad, which could not be obtained. This became a highly embracing and sad situation for almost half of the gentry, in general. Such availability of sanitary pads are not in practice to make readily available meaning there is no any safety measure for such natural things to happen, especially during time of stressful situations, which might occur because of unforeseen external factors. This natural and highly probabilistic, certain to occur, the problem of sudden bleeding certainly needed an innovative solution. An innovative solution brought was to prepare a kit consisting of a sanitary pad and a black gown like garment which can be worn by the females as it appears to any one, immediately. The sanitary pad can be used in nearest toilet facility available for women. Such kits should be carried by all females in their hand bag and also made available for sale in stalls for public utilities such as at bus sands,

railway stations and air ports etc. This small, but compulsory kit will overcome the hardships faced by women, which will be always ready to save from embarrassing situations. Even school and college going girls carrying such kits get relieved from this ember racing situations. This innovative measure supports the UN SDG No 5 Gender Equality facilitations. The kits should be made available at shops in public utility stores. Thus, it is highly important for popularization on days to the right of humanity to come to attention of public en masse.

Discussion

This discussion was devoted to fortifying various aspects and issues where the plausible Godly prismatic gender balancing will be fostering its causes.

How scientific principle based is Godly plausible prismatic gender balancing? Bus stands,

The Godly plausible prismatic gender balancing was developed from the actual and real case studies which complimented fulfilling the supporting facts and confirming proofs. Based on this several research articles applauding accepted for different American Medical Journals. Manifestation was developed as Godly plausible family fasting for gender balancing, which is entirely the natural course of family development. The development supported ideal all aspects of gynecological concerns.

How well justifiably were the factors covered in the study?

Table 1 covered highly crucial information considered in justifying to achieve decent lives for all on a healthy planet by 2030, which formed basis to devise the fulfilling the primary objective of constituting 17 SDG. The real gist analysis very well deliberated in the study by classifying groups of factors.

How befitting proved the Godly plausible gender balancing

The Godly plausible family gender balancing proved highly effective in bring results required for gender equality to produce benefits in shortest possible time, which otherwise was estimated to take 164 years. Thus, this will be highly effectively fostering ways to accomplish the UN SDG. The most important aspects were that it brought people to think in scientific justifying facts, not merely based on believe on trust, which can prove with lowest possibilities. Thus, this study adopted a new advancement in well-conceived course of development of human welfares, as a driving engine in accomplishing the SDG goals.

What significant improvement the Godly plausible prismatic gender balancing will make the SDG accomplishing the set goals.

The SDG goal was set long time back but on review it had to receive noticeable impacts of improvements. The factors got pulled down in accomplishing such promising impacts. Recent report brought out by the *Lacant* journal (Hindustan, 2025) showed no reducing atrocities of child abuse for women > 15-year age, agonies caused by near family relatives. Such difficulties will get reduced by creation of gender balanced families as there will be accompaniments at crucial situations.

The innovative measure of new personal kit for women fitting as the valuable measure for keeping prestige of women high.

Welfare measures so far thought for keeping the right of humanity for woman, in general ways, had been not so well effective. The innovative measure of providing a personal kit for

women, equipped all women acquire strength with a personal kit of protecting humanity considerations. Women with strong courage protected and acquire confidence of gender equality for works accomplishments. This new development will enable accomplishing the set goals of the SDG. This will overcome a natural set back, which formed innovative development, overshadowing all previous thought over measures.

Conclusion

The study on utility of Godly plausible prismatic family gender balancing was building natural way of producing baby by choice and not by chance, that support accomplishment of different aspects of Gynecology viz conceiving, rearing pre and post birth child cares and favoring cesarean to natural delivery.

- This study resolved various aspects of gynecological concern in Godly plausible manner, which can get fostered by its manifestation named as genetic fasting.
- The study brought that how the Godly plausible family gender balancing built crucial supports for all 17 different aspects of the UN SDGs.
- The Godly gender balancing which could not be possible earlier in human endeavors was made possible by the Godly Plausible measure presented in this study.
- The gender balancing is expected to reduce the worldly problem of child abuse of women 15 years of age and above, causing lot of health, mental and sociological sufferings.
- The study brought a novel personal kit to be kept in their handbag of all girls and women that will save them from getting embarrassed by the natural cause of bleeding specially during any external factor building stressful situation. This brings a new facilitation for ready to be available in market building prestige of women. This will empower girls in earning gender equality a crucial factor in SDG accomplishment factors.
